Physical Orgone Therapy of Diabetes

1. **On Wound Healing:** For 12 years before using the accumulator, the following was the process in the healing of wounds and abrasions in this patient: infection, inflammation with oozing of pus for about a week, and followed in the next two weeks by a drying and crusting. This crust would eventually peel off, leaving a smooth surface. In the period when the patient was undergoing treatment with the accumulator, the patient ripped off a triangular piece of skin of about 1 1/2 sq. inches from the left calf muscle. Without the application of any ointment or bandages, and using the shooter while in the accumulator, the wound healed completely within ten days without festering and without crusting.

2. **On Cold Sores on the Lips and on the Nares:** Before using the accumulator, the patient used to get cold sores on the lips and inside the nares. These sores used to go through a process of itching, blister formation with drying up and crusting. This would be very painful and last for about two weeks. During the use of the accumulator the process would be only one of itching and reddening without pain and especially noteworthy, without blister formation.

3. **On Sinusitis:** Patient, before using the accumulator, would get frequent attacks of “sinus trouble” with blocking of both nostrils. During these attacks, the patient had to use nose drops every two hours during the night. While using the accumulator, the patient did not have a single attack of a blocked nose or sinusitis.

4. **On Burns:** Patient burned his hand with hot water, and the pain was intense. He then immediately put his hand before a shooter for 15 minutes. The pain disappeared and there was no blistering.

5. **On Fatigue:** Patient would get tired about 4 o’clock in the afternoon. Fifteen minutes of use of the accumulator would be sufficient to freshen him up.

6. **On Insomnia:** Before using the accumulator, the patient habitually took 1 1/2 grains of barbiturates to induce sleep. Now, before retiring, he sits in the accumulator for about 20 minutes when he becomes drowsy and sleepy. He then sleeps restfully throughout the night.

7. **On Diabetic Neuritis:** Before using the orgone energy accumulator, the patient would have drawing pains in the limbs, especially on humid days. Now, since he is using the accumulator, these pains have largely disappeared.

8. **On the Response of the Patient to Sudden Drops of Temperature:** Before the patient began sitting in the accumulator, he found that on walking out of a warm house to an outside temperature of zero or less (Fahrenheit), he would experience pressure in the chest with difficulty in breathing. During periods of the use of the accumulator, these pressure symptoms were much less and less frequent.

9. **On Spasms of the Pylorus:** For 10 years before use of the accumulator, patient suffered post-prandial gastric distention, especially if emotionally upset. X-ray examinations revealed a delay in the emptying time and a spastic pylorus. Now, after using the accumulator for about 6 months, the patient finds that any gastric distention is readily relieved by sitting for 5 minutes in the accumulator. The sequence of events is described by the patient as follows: post-prandial pressure in the epigastric region is reduced after 5 minutes sitting in the accumulator, followed by gurgling sounds in the epigastrium and a feeling of “opening up in the stomach.” After 15 minutes, the pressure and distention completely disappears.

10. **On Frequency of Colds:** Before using the accumulator, the patient would have about 2 or 3 colds during the winter months. These would involve confinement of the patient to the house with high temperature, sore throat, and muscular pains, coughing, expectoration, and an increased insulin requirement. In the winter of 1949-50 when the accumulator was used, the patient was not laid up for a single day. On one occasion, when he felt a
cold coming on, he used the accumulator for 15 minutes every 3 hours. This aborted the cold completely.

11. In the Insulin Requirement: Before the use of the orgone energy accumulator, the patient would find that emotional stress would be followed by a feeling of a thick and sticky saliva in the mouth and sugar in the urine. To control this a higher amount of insulin was usually taken. During the six months of using the accumulator, the patient is more relaxed, less apprehensive, and has a lower insulin requirement.

12. On the Craving for Orgone Energy: After using the accumulator for 1 month, the patient developed a craving for using the accumulator. He says that the craving is similar to the craving for sweets and food during an insulin reaction.

Redescobrindo e reinteretando W. Reich

Caro Leitor

Infelizmente, no que se refere a orgonomia, seguir os passos de Wilhelm Reich e de sua equipe de investigadores é uma questão bastante difícil, polêmica e contraditória, cheia de diferentes interpretações que mais confundem do que ajudam.

Por isto, nós decidimos trabalhar com o material bibliográfico presente nos microfilmes (Wilhelm Reich Collected Works Microfilms) em forma de PDF, disponibilizados por Eva Reich que já se encontra circulado pela internet, e que abarca o desenvolvimento da orgonomia de 1941 a 1957.

Dividimos este "material" de acordo com as revistas publicadas pelo instituto de orgonomia do qual o Reich era o diretor.
01- International Journal of Sex Economy and Orgone Research (1942-1945).
02- Orgone Energy Bulletin (1949-1953)
03- CORE Cosmic Orgone Engineering (1954-1956)

E logo dividimos estas revistas de acordo com seus artigos, apresentando-os de forma separada (em PDF), o que facilita a organizá-los por assunto ou temas.
Assim, cada qual pode seguir o rumo de suas leituras de acordo com os temas de seu interesse.
Todo o material estará disponível em inglês na nuvem e poderá ser acessado a partir de nossas páginas Web.

Sendo que nosso intuito aqui é simplesmente divulgar a orgonomia, e as questões que a ela se refere, de acordo com o próprio Reich e seus colaboradores diretos relativos e restritos ao tempo e momento do próprio Reich.
Quanto ao caminho e as postulações de cada um destes colaboradores depois da morte de Reich, já é uma questão que extrapola nossas possibilidades e nossos interesses. Sendo que aqui somente podemos ser responsáveis por nós mesmos e com muitas restrições.

Alguns destes artigos, de acordo com nossas possibilidades e interesse, já estamos traduzindo.
Não somos tradutores especializados e, portanto, pedimos a sua compreensão para possíveis erros que venham a encontrar.
